

CRC Data Collection System – Key Features

- Enters basic client information quickly via driver's license scan, but can be used without scanner
- Highly efficient, can support dozens of simultaneous users on older hardware, hundreds on newer, more powerful machines
- Accessible through wireless network – either pre-existing or provide your own
- Works with Google Chrome browser, so can be used from smart phones, tablets, laptops running Windows, Android, iOS, MacOS, Linux, etc.
- No need to transfer paper from Contamination Control Zone to Clean Zone.
- Equipment can be protected from contamination: information capture in Contamination Control Zone can be done with tablet in waterproof case and Bluetooth scanner in zipper bag.
- Workers can access training materials, job actions sheets, etc.
- Clients can access informational content while waiting
- Uses public domain/open source materials:
 - no licensing cost
 - can be readily maintained and updated
- Affordable by virtually any local health department
 - Driver's license scanner can be bought for under \$50
 - Will run effectively on inexpensive, even "obsolete" hardware
- Can also be run from bootable USB if dedicated hardware not available
- Could modify to allow clients to enter their own information while waiting in line using their own devices.
