Materials needed:

1. Android device (phone or tablet) that will be used for scanning ID's.
2. Internet connection.

Steps:

1) Use the link to download the latest version.
2) Run the My Files app (search for "files" if you can't find it). Note that on phone brands other then Samsung, the files app might have a different name.
3) In the files app, go to the downloads directory.
4) Find the Android CRC eCS app. It will be named something like "crcecs-release1.2.3.apk"
5) Click on it.
6) If you get a message that your phone isn't allowed to install unknown apps from this source, click on Settings and turn on "Install unknown apps" for your files app.
7) Click install or update, depending on whether you already have a version installed.
8) When the installation is done, you can click "Open" to run the app immediately, or "Done" if you want to run it later.

NOTE: The first time you run the app, you will need to grant it camera permission. "While using the app" is the appropriate response.
